Warn winch gearbox rotation instructions

You're about to or already have installed your Warn low mount winch and you realise the clutch lever is in a location where it's difficult to reach let alone move...

What you need to do to make the clutch lever easier to reach and operate is:

stand the winch up on end so the housing is straight up in the air remove the 10 screws from the end housing lift the end housing up about 6mm [1/4"] and rotate it every two holes to the desired position reinstall the screws
